

# Project Description – BUGZ

## Project Idea

The goal of this project is to test the demo e-commerce website Automation Exercise.

Automation Exercise provides a wide range of real-world e-commerce features such as user authentication, product browsing, cart management, checkout, and account handling. These make it an ideal platform for practicing manual testing, test automation, and API validation.

## Brief Description

The QA team will perform:

- **Manual Testing:** To validate user workflows and catch usability or functional issues.
- **Automation Testing:** To automate repetitive test cases and ensure regression coverage.
- **API Testing:** To validate backend services and verify that endpoints behave as expected.
